## Definition

The family  $I \quad P(!)$  is called **SGY** if it has properties:

$$(1) \quad , \quad 2I, 3 \quad , \quad ! \quad 3 \quad 2I,$$

$$(2) \quad , \quad ; 3 \quad 2I \quad ! \quad , \quad [ \quad 3 \quad 2I,$$

$$(3) \quad ! \quad 2I,$$

$$(4) \quad (8^{\wedge} 2 \quad !) \quad f^{\wedge} g \quad 2I.$$

## Definition

The family  $I \in P(I)$  is called **SGY** if it has properties:

$$(1) \quad I, 2I, 3I, \dots, nI \in I,$$

$$(2) \quad I, J \in I \implies I+J \in I, [I, J] \in I,$$

$$(3) \quad I \in I,$$

$$(4) \quad (I \cap J) \in I.$$

- E.g.: the Frechét ideal, denoted as  $\text{Fin}$ , is a set  $[I]^{<@0}$ .
- $I, J$  denote ideals on  $I$ .

# Basic terms

## Definition

The family  $I \subseteq P(X)$  is called **filter** if it has properties:

$$(I1) \quad I \neq \emptyset, \quad I \neq P(X), \quad \emptyset \notin I,$$

$$(I2) \quad A, B \in I \implies A \cap B \in I,$$

$$(I3) \quad X \in I,$$

$$(I4) \quad (A \in I \implies B \supseteq A) \implies B \in I.$$

- E.g.: the Frechét ideal, denoted as  $\text{Fin}$ , is a set  $\{A \subseteq X \mid A \text{ is finite}\}$ .
- $I, J$  denote ideals on  $X$ .

A sequence  $(x_n)_{n \in \mathbb{N}}$  of elements of a topological space  $X$  is **convergent** to  $x \in X$  if the set  $\{x_n \mid n \in \mathbb{N}\} \cap U \neq \emptyset$  for **each neighborhood**  $U$  of  $x$ , (written  $x_n \rightarrow x$ ).

# Basic terms

## Definition

The family  $\{I_\alpha\}_{\alpha \in P(I)}$  is called **SGY** if it has properties:

$$(I1) \quad I_\alpha \cap I_\beta \in I_\alpha, \quad I_\alpha \cap I_\beta \in I_\beta,$$

$$(I2) \quad I_\alpha \cap I_\beta \in I_\alpha, \quad I_\alpha \cap I_\beta \in I_\beta,$$

$$(I3) \quad I_\alpha \in I_\alpha,$$

$$(I4) \quad (I_\alpha \cap I_\beta) \cap I_\gamma \in I_\alpha.$$

- E.g.: the Frechét ideal, denoted as  $\text{Fin}$ , is a set  $\{I\}^{<@0}$ .
- $I, J$  denote ideals on  $I$ .

A sequence  $\{x_n\}_{n \in \mathbb{N}}$  of elements of a topological space  $X$  is **SGY** to  $x \in X$  if the set  $\{x_n\}_{n \in \mathbb{N}} \in I$  for **each neighborhood**  $U$  of  $x$ , (written  $x_n \in U$ ).

- ;  $e(\mathcal{I})$  denotes the set of all continuous functions on  $\mathcal{I}$ .
  - It can be equipped with inherited topology from Tychonoff product topology of  $\mathcal{I} \mathbb{R}$ , i.e., topology of pointwise convergence.

- $C(X)$  denotes the set of all continuous functions on  $X$ .
  - It can be equipped with inherited topology from Tychonoff product topology of  $\mathbb{R}^X$ , i.e., topology of pointwise convergence.
- Let  $\{f_n\} \subset C(X)$  be a sequence of functions on  $X$  and  $f$  being function on  $X$ .
- $f_n \rightarrow f$  if and only if  $|f_n(x) - f(x)| < \epsilon$  for each  $x \in X$  and for each  $\epsilon > 0$ .

# Basic terms

- $C(X, \mathbb{R})$ ;  $C(X, \mathbb{R})$  denotes the set of all continuous functions on  $X$ .
  - It can be equipped with inherited topology from Tychonoff product topology of  $\mathbb{R}^X$ , i.e., topology of pointwise convergence.
- Let  $(f_n) : X \rightarrow \mathbb{R}$  be a sequence of functions on  $X$  and  $f$  being function on  $X$ .
- $f_n \rightarrow f$  in  $C(X, \mathbb{R})$  if  $|f_n(x) - f(x)| < \epsilon$  for each  $x \in X$  and for each  $\epsilon > 0$ .

- Let  $\mathbf{0}_X$  denote constant zero-value function on  $X$ .

$$C(X, \mathbb{R}) = \{ f : X \rightarrow \mathbb{R} \mid f \text{ is continuous} \} = \overline{\{ f : X \rightarrow \mathbb{R} \mid f \text{ is continuous} \}}^{\text{pointwise}}$$

$$f_n \rightarrow f \text{ in } C(X, \mathbb{R}) \iff f_n \rightarrow f \text{ pointwise and } f_n \text{ is } I\text{-convergent to } f$$

- We use  $C(X, \mathbb{R})$  instead of  $C(X, \mathbb{R})$

## Selection principles

Let  $P$  and  $R$  be families of sets.

- $\mathcal{F}$  has  $\frac{P}{R}$  or  $\mathcal{F}$  is a  $[P; R]$ -space if for every  $\langle h^\alpha : \alpha \in \mathbb{N} \mid \alpha \in P \rangle$  there is  $h^\lambda : \mathbb{N} \rightarrow \mathbb{N}$  such that  $\langle h^\alpha : \alpha \in \mathbb{N} \mid \alpha \in R \rangle$ .

## Selection principles

Let  $P$  and  $R$  be families of sets.

- $\mathcal{I}$  has  $\frac{P}{R}$  or  $\mathcal{I}$  is a  $[P; R]$ -space if for every  $\mathcal{A} : \mathbb{N} \rightarrow P$  there is  $\mathcal{B} : \mathbb{N} \rightarrow R$  such that  $\mathcal{A} \subseteq \mathcal{B}$ .
- If  $P$  and  $R$  denote convergences then  $\mathcal{I}$  is a  $[P_e; R_e]$ -space if for every  $\mathcal{A} : \mathbb{N} \rightarrow P$  such that  $e \in \bigcap \mathcal{A}$  there is  $\mathcal{B} : \mathbb{N} \rightarrow R$  such that  $e \in \bigcap \mathcal{B}$ .

## Selection principles

Let  $P$  and  $R$  be families of sets.

- $\mathcal{F}$  has  $\frac{P}{R}$  or  $\mathcal{F}$  is a  $[P; R]$ -space if for every  $\langle e_\alpha : \alpha \in \mathbb{N} \rangle \in P$  there is  $\langle h_\alpha : \alpha \in \mathbb{N} \rangle$  such that  $\langle h_\alpha : \alpha \in \mathbb{N} \rangle \in R$ .
  - If  $P$  and  $R$  denote convergences then  $\mathcal{F}$  is a  $[P_e; R_e]$ -space if for every  $\langle e_\alpha : \alpha \in \mathbb{N} \rangle$  such that  $e_\alpha \xrightarrow{P} e$  there is  $\langle h_\alpha : \alpha \in \mathbb{N} \rangle$  such that  $e_\alpha \xrightarrow{R} e$ .
- $\mathcal{F}$  is an  $r_1(P; R)$ -space if for a sequence  $\langle U_\alpha : \alpha \in \mathbb{N} \rangle$  of elements of  $P$  we can select a set  $\{ \alpha \in \mathbb{N} : U_\alpha \}$  for each  $\alpha \in \mathbb{N}$  such that  $\{ \alpha \in \mathbb{N} : U_\alpha \}$  is a member of  $R$ .

# Selection principles

Let  $P$  and  $R$  be families of sets.

- $\mathcal{F}$  has  $\overset{P}{R}$  or  $\mathcal{F}$  is a  $[P; R]$ -space if for every  $h^\alpha : \omega \rightarrow P$  there is  $h^{\alpha_0} : \omega \rightarrow R$  such that
  - If  $P$  and  $R$  denote convergences then  $\mathcal{F}$  is a  $[P_e; R_e]$ -space if for every  $h^\alpha : \omega \rightarrow P$  such that  $e^\alpha \overset{P}{\rightarrow} e$  there is  $h^{\alpha_0} : \omega \rightarrow R$  such that  $e^{\alpha_0} \overset{R}{\rightarrow} e$ .
- $\mathcal{F}$  is an  $r_1(P; R)$ -space if for a sequence  $h^\alpha : \omega \rightarrow P$  of elements of  $P$  we can select a set  $\{ \alpha \in \omega \}$  for each  $\alpha \in \omega$  such that  $h^\alpha : \omega \rightarrow R$ .

$r_1(I - \mathfrak{C}; J - \mathfrak{C})$  can be imagined in the following way

$$r_1(I - \mathbf{C}J - \mathbf{C})$$

classical convergence )  $I$ -convergence

classical convergence )  $I$ -convergence

### Observation

**f** $\subset$ **g** If ;  $e(t)$  is an  $r_1(I - \mathfrak{A}^J - \mathfrak{A})$ -space then ;  $e(t)$  is an  $r_1(\mathfrak{A}^J - \mathfrak{A})$ -space.

**f** $\mid$ **g** If ;  $e(t)$  is an  $r_1(I - \mathfrak{A} - \mathfrak{A})$ -space then ;  $e(t)$  is an  $r_1(I - \mathfrak{A}^J - \mathfrak{A})$ -space.

**f** $\{$ **g** If ;  $e(t)$  is an  $r_1(\mathfrak{A}^J - \mathfrak{A})$ -space then ;  $e(t)$  is an  $r_1(\mathfrak{A} - \mathfrak{A})$ -space.

classical convergence )  $I$ -convergence

### Observation

$f|g$  If ;  $e(\dagger)$  is an  $r_1(I - \mathfrak{C}J - \mathfrak{C})$ -space then ;  $e(\dagger)$  is an  $r_1(\mathfrak{C}J - \mathfrak{C})$ -space.

$f|g$  If ;  $e(\dagger)$  is an  $r_1(I - \mathfrak{C} \mathfrak{C})$ -space then ;  $e(\dagger)$  is an  $r_1(I - \mathfrak{C}J - \mathfrak{C})$ -space.

$f\{g$  If ;  $e(\dagger)$  is an  $r_1(\mathfrak{C}J - \mathfrak{C})$ -space then ;  $e(\dagger)$  is an  $r_1(\mathfrak{C} \mathfrak{C})$ -space.

**Diagram.** Selection principles for functions.

classical convergence )  $I$ -convergence

### Observation

$f \subset g$  If ;  $e(\dagger)$  is an  $r_1(I - \mathfrak{C}^J - \mathfrak{C})$ -space then ;  $e(\dagger)$  is an  $r_1(\mathfrak{C}^J - \mathfrak{C})$ -space.

$f | g$  If ;  $e(\dagger)$  is an  $r_1(I - \mathfrak{C} - \mathfrak{C})$ -space then ;  $e(\dagger)$  is an  $r_1(I - \mathfrak{C}^J - \mathfrak{C})$ -space.

$f \{ g$  If ;  $e(\dagger)$  is an  $r_1(\mathfrak{C}^J - \mathfrak{C})$ -space then ;  $e(\dagger)$  is an  $r_1(\mathfrak{C} - \mathfrak{C})$ -space.

$$\begin{array}{ccccccc}
 r_1(\mathfrak{C} - \mathfrak{C}) & \longrightarrow & r_1(\mathfrak{C}^J - \mathfrak{C}) & \longrightarrow & r_1(\mathfrak{C} - \mathfrak{C}) & \longrightarrow & \text{Ind}_Z(\dagger) = 0 \\
 \uparrow (1) & & \uparrow & & & & \\

Let  $A \subseteq P(I)$ .

- a sequence  $s \in {}^I A$  will be called an  $A$ -**slalom**.
- a function  $f \in {}^I J$  **goes through**  $A$ -slalom  $s$  if  $f \restriction s(\alpha) \in J$ ,  
i.e.,  $f \restriction s(\alpha) \in J$ .
- We say that  $f$  goes through  $I$ -slalom instead of  $f$   $\mathcal{G}$ -goes through  $I$ -slalom.

$\mathfrak{b} = \min \{ \aleph_{\alpha} : \exists \text{ } \mathcal{G}\text{-slalom } s \text{ such that } f \text{ goes through } s \}$

# Cardinal invariants

Let  $A \subseteq P(I)$ .

- a sequence  $s \in {}^I A$  will be called an  $A$ -**slalom**.
- a function  $f \in {}^I J$  **goes through**  $A$ -slalom  $s$  if  $f \restriction s \in J^{\omega}$ ,  
i.e.,  $f \restriction s \in \bigcup_{n \in \mathbb{N}} s \restriction n$ .
- We say that  $f$  goes through  $I$ -slalom instead of  $f$   $\mathbb{S}$ -goes through  $I$ -slalom.

$$b = \aleph \text{ } f \in R \text{ } ; (8 \mathbb{S}\text{-slalom } s) (9' \in R) : (f \text{ goes through } s)g:$$

$$(I; J) = \aleph \text{ } j \in R \text{ } : R \text{ contains } I\text{-slaloms, } (8' \in J) (9s \in R) : (f \text{ } J\text{-goes through } s) :$$

Let  $A \subseteq P(I)$ .

- a sequence  $s \in \mathcal{S}^I(A)$  will be called an  $A$ -slalom.
- a function  $f \in \mathcal{S}^I(J)$  goes through  $A$ -slalom  $s$  if  $f \restriction s \in A$ ,  
i.e.,  $f \restriction s \in A$ .
- We say that  $f$  goes through  $I$ -slalom instead of  $f$  goes through  $I$ -slalom.

$$\mathfrak{b} = \min \{ \mathfrak{S}^I(A) : A \subseteq P(I); (f \restriction s) \in A \text{ for some } s \in \mathcal{S}^I(A) \}$$

$$(I; J) = \min \{ \mathfrak{S}^I(J) : R \text{ contains } I\text{-slaloms, } (f \restriction s) \in R \text{ for some } s \in \mathcal{S}^I(J) \}$$

- J. Šupina's results (2016):
  - $(\mathfrak{S}^I; J) = \mathfrak{b}_J$ ,
  - if  $I_1 \leq I_2$  and  $J_1 \leq J_2$  then  $(I_2; J_1) \leq (I_1; J_2)$ ,
  - $\mathfrak{b}^{\aleph_1}(I; J) = (I; J)$ .

## Theorem (V. Š., J. Šupina)

$\text{fcg} \mathbf{HI} \ 6_V J \ \mathbf{zPC}^\wedge \ (I;J) \ \setminus \ \mathbf{S} \text{fk}_{I;J}; \mathbf{b}_J \ \mathbf{gi}$

$\mathbf{f|g} \ \mathbf{HI} \ 6_V J \ \wedge @J \ \vee I \ \mathbf{zPC}^\wedge \ (I;J) = \setminus \ \mathbf{S} \text{fk}_{I;J}; \ (J;J) \ \mathbf{gi}$

$\mathbf{f\{g} \ \mathbf{HI} \ \mathbf{S} \ \mathbf{z} \ \mathbf{YzPC}^\wedge \ (I; \mathbf{GS}) = \setminus \ \mathbf{S} \ \mathbf{f} \langle \mathbf{bf} \ (I); \mathbf{b} \ \mathbf{gi}$

## Theorem (V. Š., J. Šupina)

$$f|g \text{ BI } \mathcal{C}_V J \text{ zPC}^\wedge (I;J) \setminus \mathcal{S}f_{I;J}; b_J gi$$

$$f|g \text{ BI } \mathcal{C}_V J \text{ -}^\wedge @J \text{ } \mathcal{C}_V I \text{ zPC}^\wedge (I;J) = \setminus \mathcal{S}f_{I;J}; (J;J) gi$$

$$f\{g \text{ BI } \mathcal{S} \text{ z } \mathcal{Y} \text{ zPC}^\wedge (I;GS) = \setminus \mathcal{S}f\langle bf(I); bgi$$

Diagram. Cardinal  $(I; J)$ .
